                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                275
                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                 95
                                                                                                                                      vascular
MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activuth with a candidate agent, where the molecule is a nucleic acid molecule comprising MIVR-1, IEX-1, VUDD-1, BTG-2 and ITS-11d or its expression product, determining if the anti-apoptotic activity is modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring progression of such diseases and disorders as characterised by increased apoptotic cell-death of vascull endothelial cells e.g. cardiac hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart failure. The present sequence

                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, and sand central nervous system diseases, and as Alzhaimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    76 APPRPTDRLAVPPFAQRERFHRFQPTYPYLQHEIDLPPTISLSDGEEPPPYQGPCTLQLR 135

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid molecule encoding a Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having cardival anti-apoptotic activity and fragments of it provided they are not identical to Genbank sequences A1761441.1, A1594390.

WM 004338 and AQ177461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule comprising MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its modulated and thereby identifying a modulator activity is modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring progression of such diseases and calsorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart failure. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

                                                                               the encoded polypeptides (AAAA213) with noctropic, the encoded polypeptides (AAAA213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, encropathy and localised neuropathies and central nervous system diseases, encode as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activities such as: Immune system suppression, Activinihibin activity, chemotactic/chemokinetic and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                165

Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

Claim 8; Fig 6A-B; 175pp; English.

disorders, atelectasis, pulmorary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, The present sequence represents a murine TANGO 261 polypeptide. The specification also describes TANGO 266, TANGO 216, TANGO 267. The TANGO 267, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficient and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and

and New polypeptide useful for diagnosing and monitoring the presence metastases of prostate cancer in a patient and as a component in databases for search analysis as well as in sequence analysis algorithms

Claim11; Page 213-214; 242pp; English.

The invention relates to an isolated polypeptide comprising a sequence with 60 % identity to one of prostate specific protein (PSP) sequences, or comprising an amino acid sequence encoded by one of 136 nucleotide prostate specific nucleic acids sequences, PSNA, (or a sequence that hybridises to it or is 60% identical to it), given in the specification. Also included are a vector comprising the polynucleotide, a host cell acomprising the vector, an antibody specific for the PSP proteins and a vaccine comprising the protein or polynucleotide. The PSP and PSNA are useful for diagnosing and monitoring the presence and metastasses of prostate cancer in a patient. The PSNA is useful for determining the

1;
the level PSNA in a sample. An antibody to the PSP is useful for determining the presence of prostate specific protein in a sample, and for treating a patient with prostate cancer, which induces an immune response against the prostate cancer cell expressing the nucleic acid or polypeptide and a kit is useful for detecting a risk of cancer or presence of cancer in a patient. PSNA is useful as hybridisation probes to detect, characterise and quantify hybridising nucleic acids from both genomic and transcript-derived nucleic acid samples and also in microarrays. Sequences of PSP and PSNA are useful as components in databases for search analysis as well as in sequence analysis algorithms. PSNA is useful to drive in vivo expression of PSP. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

AAB18464-66 represent murine TANGO 261 proteins. The specification also describes TANGO 265, TANGO 262, and TANGO 267. The TANGO 260 to properties can be used to modulate cellular adhesion, modulate cellular adhesion. The TANGO collular adhesion and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as intending the cells and to treat bone and/or and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders, note: the present sequence does not appear in the specification; it was created using information provided. 217 AA; Sequence Fraser CC; Sharp JD, (MILL-) MILLENNIUM PHARM INC. 01-MAR-2000; 2000WO-US05226 99US-0122458 Barnes TM, Holtzman DA,

Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes. e.g. for treating cancer -

Disclosure; Page -; 175pp; English.

AAB18464-66 represent murine TANGO 261 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO 200 cloppyptides can be used to omodulate cellular spoiliferation, modulate cellular adhesion, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficting and/or migration, adollate cellular interactions, modulate cell adhesion in proliferation, adollate cellular interactions, and cell function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated disease, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disorates, treat cardiovascular disorders such as ischemic heart disorate disease with the ovaries, and cerebral oedema, cartilage associated disease with the ovaries, and cerebral cancerial and viral meningitis, Alzheimer's Disease, inflammations, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, and treat hepatic disease, inflammations, bacterial and viral meningitis, and treat hepatic disease, inflammations, brain disease, multiple sclerosis, brain cancers, note: the present sequence does not appear in the specification; it was note: the present sequence does not appear in the specification; it was created using information provided.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

erequest@sanger.ac.uk this sequence version replaced gi:10198628.

this sequence version replaced gi:10198628.

e assembly data is compared from overlapping clones.

ces are found these are annotated as variations
a note of the overlapping clone name. Note that the
tation may not be found in the sequence submission
to the overlapping clone, as we submit sequences with
verlap as described above.

abbreviations are used to associate primary accession
in the feature table with their source databases:

'SWISSPROT' Tr:, TREMBL; Wp:, WORMPEP; Information
database can be found at
ger.ac.uk/Projects/Celegans/wormpep This sequence
from part of bacterial clone contigs of human
constructed by the Sanger Centre Chromosome 20

Human DNA linear PRI 24-FEB-200

Human DNA sequence from clone RPS-1059L7 on chromosome

20q13.2-13.33 Contains the 5' end of the TMEPAI (PMEPAI) gene
encoding an androgen induced 1b transmembrane protein, ESTB, STSB,

AL121913

AL121913

HUMO CpG islands, complete sequence.

HTG; CpG island; PMEPAI; TMEPAI; transmembrane protein.

HTG; CpG island; PMEPAI; TMEPAI; transmembrane protein.

On Mar 6, 2000 this sequence version replaced gi:7007305.
On Muring sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission /product="dJ1059L7.1.1 (androgen induced type 1b transmembrane protein (PMEPA1), isoform 1)" /note="match: cDNAs: Em:AF009426 Em:AF009427 Em:AF009425 2076. 2155 /note="12 repeat: matches 2616. .2707 of consensus" E-mail enquiries: humquery@sanger.ac.uk Clone 'note="MIR repeat: matches 71. .145 of consensus" .165 of consensus" /evidence=not\_experimental /product="dJ1059L7.1.2 (androgen induced type 1b transmembrane protein (PMEPA1), isoform 2)" /protein id=10AC32887.1" /db\_xref="GI:13160408" /product="dJ1059L7.1.2 (androgen induced type 1b transmembrane protein (PMEPA1), isoform 2)"

2000-423423/36. P-PSDB; AAB01388 New human neuron-associated proteins and polynucleotides encoding them, useful for diagnosis, treatment and prevention of cell proliferative disorders including cancer, neuronal and neurological disorders

Claim 9; Page 136; 145pp; English

Human neuron-associated proteins (NEUAP) can be used for for treating or preventing a disorder associated with decreased treating or preventing a disorder associated with decreased cypression or activity of NEUAP. Antagonists of NEUAP are useful for treating or preventing disorder associated with increased expression or activity of NEUAP. NEUAP. Their fragments or derivatives are useful for treating neurological disorder such as epilepsy, ischemic cerebrovascular disease, stroke, cerebral neoplasms, Alzheimer's disease, Pick's disease, Huntington's disease, dementia and experimenting diseases, but information's disease, neurological disorder such as epilepsy, ischemic diseases including kuru, Creutzfeldt-Jakob disease, nutritional and diseases including kuru, Creutzfeldt-Jakob disease, nutritional and evelopmental disorders of the central nervous system cerebral conternation of the central nervous system disorders, palsy, neuroskeletal disorders, palnal cord diseases, muscular dystrophy and cother neuromuscular disorders, paritheral nervous system disorders, inherited, metabolic, endocrine, and scritophrenic disorders, antender disorders, conternative disorders under as actinic keratosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD), myelofibrosis, paroxysmal nocturnal connective disorder such as actinic keratosis, arteriosclerosis, bursitis, cirrhosis, paroxysmal nocturnal connective disorder such as acquired immunodeficiency syndrome (ALDS), Addison, disorders under as acquired immunodeficiency syndrome (ALDS), Addison, complications of cancers of the adrenal gland, bladder, bone marrow, brain, breast, cervix, and an autoimmune, and cancers of the adrenal gland, werner syndrome complications of cancer, hemodialysis, and extracorporeal circulation, infections, and trauma. This sequence was given the Incyte ID no. 1971288CBI.

Sequence 1061 BP; 225 A; 342 C; 326 G; 168 T; 0 other;

New human secretory proteins and polynucleotides, useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. AIDS), nor cancers - proliferations or cancers -

Claim 1; SEQ ID NO 267; 458pp + Sequence Listing; English.

The invention relates to a secretory polynucleotide (designated sptm)

comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

naturally occurring polynucleotide sequence at least 90 % identical to

the polynucleotide sequence, a polynucleotide complementary to them or an

RNA equivalent of them. The polypeptide or polynucleotide are useful for

treating, preventing or diagnosing a disease or condition associated with

the expression of functional SPTM. These are particularly useful for

the expression of functional SPTM. These are particularly disorders

(e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's

disease), neurological disorders (e.g. epilepsy, Huntington's disease,

clasease), neurological disorders (e.g. epilepsy, Huntington's disease,

chementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

chizophrenia or amresial, or cell proliferative disorders (e.g.

sochizophrenia or amresia), or cell proliferative disorders (e.g.

contacts of the brain,

leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,

leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,

cheast, cervix or prostate).

Note: The sequence data for this patent did not form part of the printed

syncopication, but was obtained in electronic format directly from WIPO at

comparisors.

AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to medulate cellular adhesion. The reclular adhesion and/or medulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, medulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, and hematopoietic associated diseases and disorders, atelectasis, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, prochitis, pronchitis asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain hermiations, iatrogenic disease, inflammations, iatrogenic disease, inflammations, iatrogenic disease, inflammations, interaction of bone and viral meningitis, Alzheimer's Disease, cerebral
                                                                                                                                                            TANGO 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atlectash; pulmonary congestion; oedema: emphysema; chronic bronchitis; bronchial aschma; bronchiectash; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; holselmer's Disease, cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer as well as for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications. ABK92115-ABK92263 represent prostate cancer-associated polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes are expressed in a prostate tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO CC polypoptides can be used to modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated clisorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, tract bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, bronchiectasis, intestinal disorders, spleen associated diseases. CC asthma and bronchiectasis, intestinal disorders, spleen associated diseases. CC asthma and bronchiectasis, intestinal disorders, spleen associated conficeration of bone and cartilage cells and to treat bone and/or cortilage associated with the ovaries, and cerebral oedems, cartilage associated with the ovaries, and cerebral oedems, harmon's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. Cc hydrocephalus and encephalitis, and treat hepatic disorders.
                                                                                                                                     cellular proliferation; cellular differentiation; cellular adhesion; von Milebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitels; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; acatiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder; ss.

Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

Disclosure; Page -; 175pp; English.

describes TANGO 266, TANGO 261 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO 262 cellular describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, arelectasis, cand hematopoietic associated diseases and disorders, spleen associated diseases and disorders, spleen associated as sense modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedems, hydrocephalus, brain herniations, iatrogenic disease, inflammations, and please, crebbral cerebral carbial and or all maningitis, Alzheimer's Disease, crebbral cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. note: the present sequence does not appear in the specification; it was created using information provided.

```
the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as all coalised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Sydrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin'inhibin activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed

The invention relates to an isolated nucleic acid molecule encoding a Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having cardiac cell anti-apoptotic activity and fragments of it provided they are not identical to Genbank sequences A1761441.1, A1594390, M 004338 and A217461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule comprising MIVR-1, IER-1, VDUP-1, BTG-2 and TIS-11d or its comprising MIVR-1, televanishing if the anti-apoptotic activity is modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring progression of such diseases and lisorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, streating-cell-death of cardiac hypertrophy, myocardial infarction, streating-cell-cells and heart failure. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | CGGAGCTGGAGTTTGTTCAGATCATCATCATCGTGGTGGTGATGATGGTGGTGGTGGTGG 164

Prostate specific nucleic acid DEX0259 32. AAGAGACTTGCAAAAAAAAAA 1058 Claim 1; Page 166-167; 242pp; English ΰ Liu BP. ABS61424 standard; cDNA; 1583 ŝ 01-NOV-2001; 2001WO-US45654. 01-NOV-2000; 2000US-244782P 05-NOV-2002 (first entry) Chen (DIAD-) DIADEXUS INC WPI; 2002-490217/52. Recipon H, WO200242776-A2. Homo sapiens 30-MAY-2002 algorithms 1035 384 264 915 144 84 24 ABS61424; 444 735 324 855 204 975 919 919 795 Sun Y, RESULT 11 ABS61424 염 유 ò g ò 임 ò g ò 셤 ò g ò g ò ò .; The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, mimunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as immune system suppression, Activin/inhibin activity, chemotactis/chemokinetic activity, heametactis/and therapy, drug screening, and thrombolytic activity, arthritis and inflammation, leukaemias and 195 445 865 255 802 315 745 375 685 435 625 495 565 555 505 615 C.N.S disorders.

```
prostate specific nucleic acids sequences, PSNA, (or a sequence that hybridises to it or is 60% identical to it), given in the specification. Also included are a vector comprising the polynucleotide, a host cell comprising the vector, an antibody specific for the PSP proteins and a vaccine comprising the protein or polynucleotide. The PSP and PSNA are useful for diagnosing and annitoring the presence and metastases of prostate cancer in a patient. The PSNA is useful for the level PSNA in a sample. An antibody to the PSP is useful for determining the presence of prostate specific protein in a sample, and for treating a patient with prostate cancer, which induces an immune response against the prostate cancer cell expressing the nucleic acid or polypeptide and a kit is useful for detecting a risk of cancer or presence of cancer in a patient. PSNA is useful as hybridisation probes to detect, characterise and quantify hybridising nucleic acids from both genomic and transcript-derived nucleic acid samples and also in databases for search analysis as well as in sequence analysis algorithms. PSNA is useful to drive in vivo expression of PSP. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequence is a PSNA of the invention.

The present invention describes a method (M1) for determining a toxicological response to an agent, which comprises comparing the expression profile of one or more human toxic response genee to a reference gene expression profile indicative of toxicity, and so determining the presence of a toxic response to the agent. Also described: (1) an array comprising one or more polynuclecides selected corner to expension of the partial sequences given in AB282842 to ABZ84764, or their fragments of at least 20 nucleotides or homologues; and (2) determining if a gene putatively identified to be a toxic response gene plays a role on toxic response pathways by determining the expression profile of the gene after exposure of cells or a muman subject to a known toxic pharmaceutical or industrial agent, comprising: (a) expossing cells to an agent or isolating the test gene expression profile for a putatively identified toxic response gene after exposure to a known toxic pharmaceutical or industrial agent; and human subject who was exposed to an agent; (b) obtaining the test gene expression profile for a putatively identified toxic response gene after exposure to a known toxic pharmaceutical or industrial agent; and comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the test profile to the expression profile of a gene with a similar function or comparing the tes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   profile of that gene after exposure to other known toxic compounds. The methods are useful for predicting and determining toxicological responses on a cellular, organ or system level. The arrays comprising the human genes are useful for toxicological screening of drugs, pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TGCCGCCCTTCGCCCAGCGGGGGGCGCTTCCACCTTCCAGCCCACCTATCCGTACCTGC 416

The present sequence is one of 3351 sequences in a library of human polymucleotides. The library is used to detect differentially expressed genes cortelated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polymucleotides. The probes can be used for chromosome mapping of the polymucleotides. The probes can be used for chromosome mapping of the polymucleotides and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polymucleotides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and produces at the polymucleotides, polymeptides and produces against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia, cypplasia and hyperplasia.

The invention relates to an isolated nucleic acid molecule encoding a Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having cardiac cell anti-apoptotic activity and fragments of it provided they are not identical to Genbank sequences AIY6141.1, A1594390, MM 004338 and AQ177461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of they are molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule comprising wilth. Totating a molecule having cardiac cell anti-apoptotic activity is expression product, determining if the anti-apoptotic activity is computated and thereby identifying a modulator. The cardiac cell anti-treating, diagnosing and monitoring progression of such diseases and disorders as characterised by increased apoptotic cell-death of vascular cellsers as characterised by increased apoptotic cell-death of vascular cellsers as characterised by increased apoptotic cell-death of vascular cellsers as characterised by increased apoptotic cell-death of vascular cellsers as characterised by increased apoptotic cell-death of vascular cellsers as characterised by increased apoptotic cell-death of vascular cellsers as characterised by increased apoptotic cell-death of vascular cells e.g. cardiac hypertrophy, mycardial infarction, stroke, arteriosclerosis and heart failure. The present sequence is one of the four Genbank sequences (AI761411.1) which are homologous to the cDNA for human MIVR-1 and which are specifically disclaimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    947 GGGCGCAGCAACGCATCGTGTGGCCCTCCCCTCCCACCTCCCTGTGTATAAATATTACA 1006
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      707
